Summary

Curious data engineer who likes learning by building. I take data end to end: integrating systems and APIs, building ETL/ELT pipelines with Python, SQL, Airflow, dbt and Snowflake, and turning the results into Power BI dashboards.

Experience

Freelance Sep 2025 – Present
Data Analyst & BI Developer · Remote

- Delivered data analysis and Power BI dashboards for 2 clients, turning their business questions into KPIs they could track.

Ejada Feb 2025 – Jul 2025
Software Developer (Integrations) · Buraydah

- Built and maintained inbound and outbound REST API integrations using IBM API Connect.
- Developed applications on the OutSystems low-code platform.
- Tested and deployed integrations from development through to production.

Hackathonat
Data Analyst (Part-time) · Remote Apr 2024 – May 2024
Data Analyst Intern · Remote Jul 2023 – Aug 2023

- Built dashboards end to end: web scraping, data cleaning and data visualization.
- Wrote a Python tool on X's Engagement API that filters tweets, analyzes engagement metrics and generates charts and an insights report.
- Analyzed monthly data to report progress against monthly goals.

Projects

InvaSight – Investment Portfolio Insights Pipeline | SDA capstone Sep 2026

- Owned the end-to-end data pipeline, from multi-source ingestion to a Power BI DirectQuery dashboard.
- Ingested foreign exchange (FX), metals and equities APIs plus an internal transactions ledger into a SAR-denominated star schema (dimensional data model) in the Snowflake data warehouse.
- Orchestrated with Apache Airflow (a daily API-extract DAG and a separate 45-minute ledger DAG); dbt for transformations and data quality tests; Python extraction tested with pytest; containerized with Docker on AWS EC2.
- Recovered the full dbt project from Snowflake query history after the project's EC2 server was compromised.

Bank Statements Analysis | personal project

- Built a Streamlit and Python app that ingests raw bank statements, cleans and categorizes transactions, and shows interactive insights.

Education

Bachelor of Computer Science – Qassim University Sep 2019 – May 2024

- GPA 4.5 / 5. Coursework: Database Systems, Data Structures, Algorithms, Machine Learning, Artificial Intelligence.

Certifications

Data Engineering Bootcamp – Saudi Digital Academy (SDA), 7 weeks Sep 2026
Associate Data Engineer – DataCamp Aug 2024
Google Data Analytics – Google Aug 2024

Technical Skills

Programming	Python (Pandas, pytest), SQL, JavaScript
Data engineering	ETL/ELT, data modeling (star schema), data warehousing, data quality testing, orchestration
Tools	Apache Airflow, dbt, Snowflake, Azure Data Factory, Docker, Git, CI/CD
Cloud	AWS (S3, EC2, IAM), Azure
Integration	REST APIs, IBM API Connect, OutSystems
Analytics & BI	Power BI, Excel, Streamlit, web scraping, data cleaning
Languages	Arabic (native), English (fluent; STEP English proficiency test score 88)

Leadership & Community

TechVerse – Co-Founder Aug 2022 – Present

- Co-run a tech community that hosts talks and bootcamps; also tutored Data Structures and Statistics to Qassim University students (2021–2025).
